

ALVA Satellite

Braille displays

The ALVA Satellite is a series of Braille displays providing the blind and visually impaired full access to the world of communication and information. Just plug your ALVA Satellite Braille display into your computer's or laptop's USB port and you will have easy and quick access to the most complex applications.

The ALVA Satellite series feature two unique Satellite keypads enabling the user to issue reading, navigation and related commands directly from the Braille display.

The spacious front-panel of the ALVA Satellite allows you to move the Braille line across the computer screen – by using nothing more than your thumbs.

The ALVA Satellite series is available in three models:

ALVA 544 Satellite Traveller

This slim, lightweight Braille display fits perfectly under a laptop, making it your perfect companion for every situation. Thanks to the state-of-the-art features, enhanced navigation and highly productive operating possibilities, the ALVA 544 Satellite Traveller is a real plug-and-play dream.

ALVA 570 Satellite Pro

The ALVA 570 Satellite Pro is the first desktop model designed specifically for use within a graphical interface. This gives users the advantage of a wide Braille line, but in an elegant and ergonomic profile.

ALVA 584 Satellite Pro

The ALVA 584 Satellite Pro combines the convenience of the ALVA Satellite legacy with the capabilities of an 80-character display into a low-profile, extended length display for the professional user.

Whether you are looking for superior Braille quality, ease of use, enhanced navigation possibilities, durability or flexibility, Optelec's line of ALVA Satellite Braille displays is ready to meet or exceed your needs.
