The New Optelec ClearNote Portability Perfected

A new addition to the Optelec family, the ClearNote Portable is a powerful near and distance viewing solution. A portable desktop viewer with a small footprint, the ClearNote Portable streams power directly from a laptop, while taking up little desk space.

With three possible viewing options the ClearNote Portable is ideal for any classroom or office setting. The ultra flexible camera rotates both vertically and horizontally, providing crisp and clear images from any distance. Additionally, the ClearNote Portable offers self viewing capabilities. The mirror like function allows for simple make-up application.

Standing above in the marketplace, the ClearNote Portable offers superior functionality. As a standard with all Optelec electronic video magnifiers, the ClearNote Portable offers contrast and brightness control to personalize your needs for optimal viewing comfort. To make viewing at any distance easy, the preset functionality remembers the user preference. Simply rotate the device to your viewing needs and the camera does the rest.

As an added benefit, the ClearNote makes it easy to store images. Use the quick key strokes or the standard computer short keys to store images to view at a later time. As an additional feature, the remote control gives the ability to change settings and options at your fingertips. Combining near and distance viewing with portability and flexibility makes the Optelec ClearNote the ideal choice for the classroom, office and home.
